Knöchelmann

Straßenbau Bodenstabilisierung Mix-in-Place-Recycling

Innovative - gentle on the resources - future-oriented

Knöchelmann Straßenbau Bodenstabilisierung Mix-in-Place-Recycling is a highly specialised service provider in the construction field offering innovative solutions for the **soil improvement** and **stabilisation**.

Our know-how consists of the targeted placement of mineral aggregates and hydraulic binding agents in order to establish the stability and durability of the sub-structure and the upper layer of ballast in such a way that it satisfies the constantly increasing demands of high-quality road construction.

We make an important contribution to sustained ecological construction by recycling salvage and using it again as a raw material in our processes.
