

## The company

### Responsibility for the future

Knöchelmann Straßenbau Bodenstabilisierung Mix-in-Place-Recycling was founded in 1996 and has successfully established itself since then as a highly specialised supplier of innovative solutions for the **soil improvement** and **stabilisation** at home and abroad. As service providers in the construction field, we are long-standing partners of renowned road construction corporate groups in Germany, Austria, Sweden, Spain, Portugal, Poland and Hungary.

We use computer-controlled technology to prepare the subsoil upon which Europe's fastest and most modern roads are developed. Our know-how consists of the targeted placement of mineral aggregates and hydraulic binding agents in order to establish the stability and durability of the sub-structure and upper layer of ballast in such a way that it satisfies the constantly increasing demands of high-quality road construction.

Our uncompromising demand on quality is substantiated by the continuous examination of our services by test laboratories.

We accept responsibility for the generations to follow, because:

- Our **innovation** is to build using building materials that do not pollute the environment.
- Our **responsibility** lies in sparing the resources by means of recycling salvage to new raw materials.
- Our **vision** is a cultural landscape without building material landfills.
